## WebCHIP 2.0 How-To

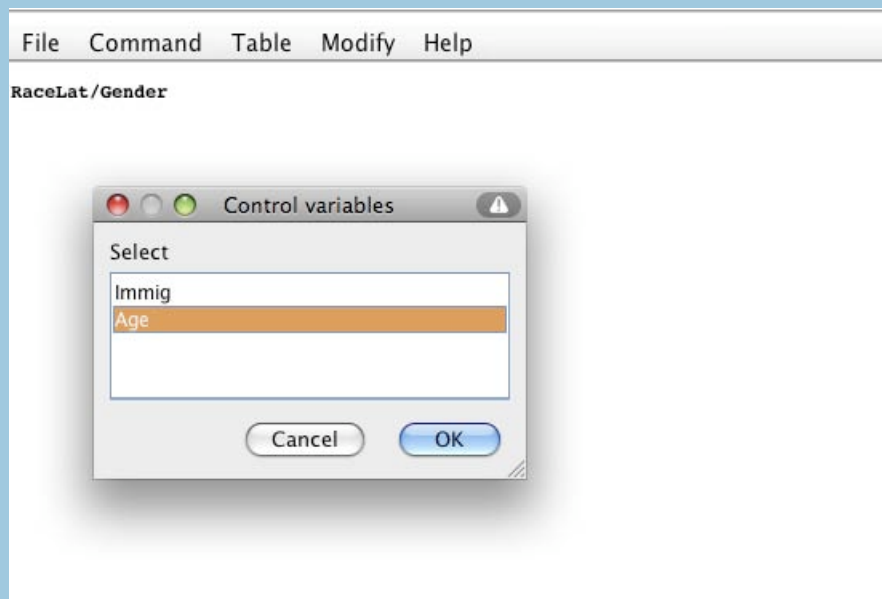

### *Use a Control Variable*

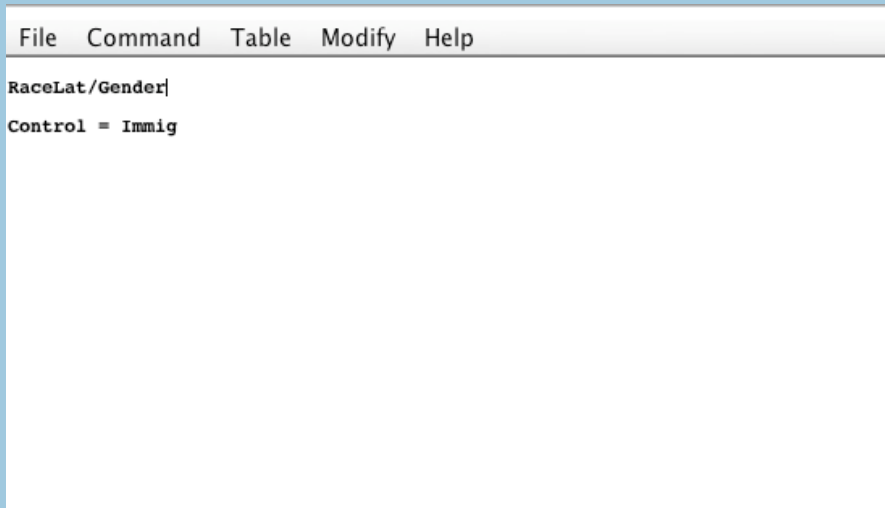

- (1) Open the dataset is in WebCHIP 2.0.
- (2) Before a control variable can be employed, a row variable and a column variable must be selected by creating a crosstabulation.
- (3) Now, select **Table > Control**

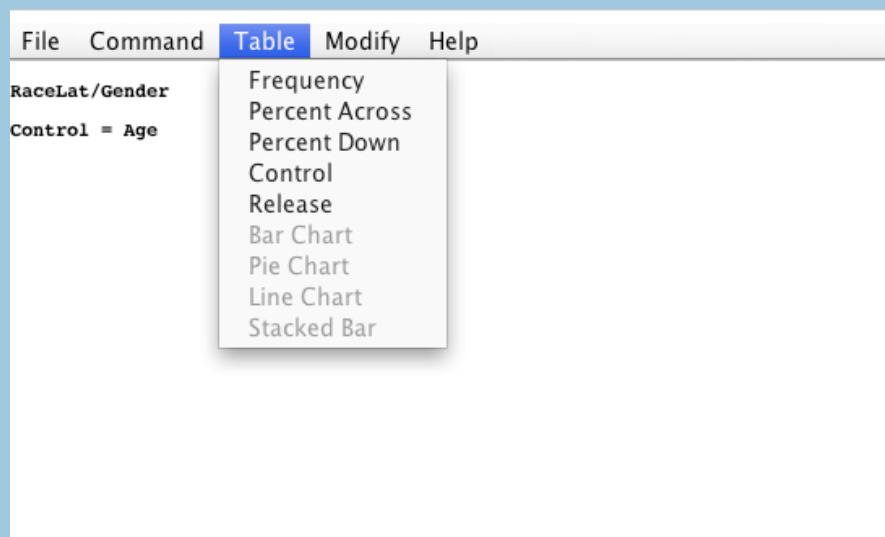

- (4) A box will appear where you can select a control variable. Click OK.

(5) WebCHIP will output the control variable.

(6) A table must be created (frequency, percent across or percent down) to employ the control variable.

- Whichever table you choose, WebCHIP will output multiple tables (one per category of the control variable). You will need to use the scrollbars to see all of your data.
